

CHINA

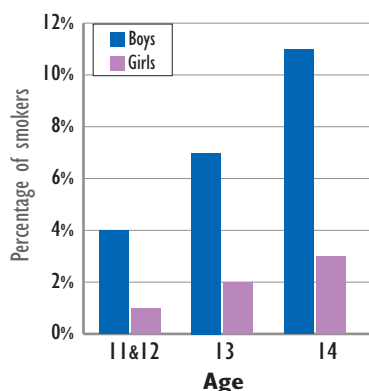

TOBACCO BURDEN FACTS

China ratified the Framework Convention on Tobacco Control on August 28, 2005. The treaty went into effect in China on January 9, 2006.

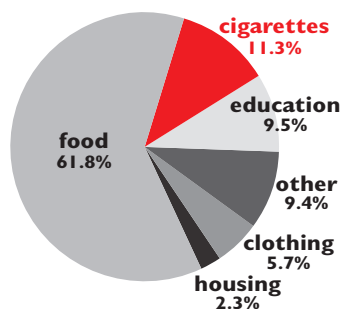

Smoking prevalence in China (2002)¹

Youth smoking prevalence by age in China (2005)⁴

Expenses of poor, rural households in China (2002)¹⁶

CONSUMPTION

Tobacco use is rising in China.

- China is the world's largest producer and consumer of tobacco.¹
- China has approximately 300 million smokers.²
- Among adults (age 15+), 31% of the population smoke with a significant difference between genders — 57% of Chinese males and 3% of Chinese females smoke.³
- The average starting age for smoking has dropped from 22.4 in the 1980s to around 19.7 years in 2002.⁴
- Among 14 year olds, 11% of boys and 3% of girls smoke.⁵

HEALTH CONSEQUENCES

Tobacco use is deadly. Smoking kills up to half of all life time users.⁶

- One million Chinese die from tobacco-related illness each year.⁷
- If current trends continue, China's death toll will reach 2.2 million per year by 2020.⁸
- By 2030, tobacco will cause one-third of all male deaths between ages 35 to 69.⁹
- Lung cancer deaths have increased 465% in the past 30 years and make up 23% of all cancer deaths in China.¹⁰
- Chinese male smokers are almost 6 times more likely to develop chronic obstructive pulmonary disease (COPD) than Chinese male non-smokers.¹¹
- Over half of the country's non-smokers, about 540 million people, report exposure to secondhand smoke.¹²
- Exposure to secondhand smoke kills 100,000 people in China every year.¹³

COSTS TO SOCIETY

Tobacco exacts a high cost on society.

- Smoking costs Chinese society RMB 186 billion (\$22.7 billion USD) each year, or 1.9% of China's GDP.¹⁴
- Direct medical costs of smoking are RMB 14 billion (\$1.7 billion USD), which accounts for 3.1% of China's national health expenditures in 2000. Indirect costs reach RMB 172 billion (\$21 billion USD).¹⁵
- Poor households in China spend 6.6-11.3% of total household expenditures on cigarettes.¹⁶
- In 1998 alone, medical spending related to smoking and consumer spending on cigarettes impoverished more than 50 million people.¹⁷
